Kolawole Opeyemi Oscar

Junior Data Analyst | SQL · Excel · Power BI

+234 813 872 5215 | kolawoleopeyemioscar@gmail.com | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Hands-on experience using SQL Server, Excel and Power BI to clean, validate, analyse and present data through practical portfolio projects, including 49 data-quality issues investigated and closed and a star-schema model built on 1.8 million transaction lines. Experienced in working with multi-table datasets, building data models, developing interactive dashboards and documenting data-quality findings. Brings over three years of Quality Assurance experience in data accuracy, investigation, documentation and daily reporting to management.

TECHNICAL SKILLS

Strongest: SQL Server / T-SQL (joins, aggregations, subqueries, CTEs, window functions, data cleaning and validation); Excel (Power Query, Power Pivot, PivotTables, lookup and conditional aggregation functions)

Working proficiency: Power BI (Power Query, DAX measures, star-schema modelling, interactive dashboards, KPI reporting)

Developing: Python (pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook)

Analysis Practices: Data cleaning, data validation, exploratory data analysis, KPI reporting, dashboard design

Tools: SSMS, Git, GitHub, VBA (basic), Jira, Trello, Postman

SELECTED DATA ANALYTICS PROJECTS

BrightHaus Electronics Sales Analytics Excel · Power Query · Power Pivot · DAX

Fictional Nigerian electronics retailer, 31 stores, Jan 2022 – Dec 2025 | Synthetic dataset, six related tables

- Cleaned and transformed six related tables in Power Query and built an Excel Data Model with DAX measures for Net Sales, Gross Sales, Discounts, Profit, Return Rate and Average Order Value.
- Investigated, verified and closed 49 data-quality issues (including duplicate product IDs with conflicting prices and orders with missing dates), documenting each in an Issue Log.
- Built a five-page interactive dashboard with slicers and Key Insight panels covering ₦10.54B Net Sales across 19,032 valid orders, separating employee-assisted (₦7.47B) from online (₦3.08B) sales.

JRAD Retail Superstore Dashboard Power BI · Power Query · DAX

Synthetic Nigerian supermarket dataset | 12 source tables, 1.8M transaction lines, 225,499 receipts, 5 branches

- Profiled and cleaned the source tables in Power Query; corrected scrambled branch names across all 60 employee records and flagged corrupted Peak_Hours values instead of inventing replacements.
- Designed a star-schema model (two fact tables, 14 relationships, marked Date table) with filter-safe DAX measures; traced a 1,046.8% month-over-month error to date-range logic and rebuilt the measure.
- Wrote filter-safe DAX measures (Total Revenue, Average Transaction Value, dynamic Top Branch ranking) so results stay correct when slicers are applied.
- Built a six-page dashboard reporting ₦15.33bn Total Revenue; found that the top 20% of products generate 74% of revenue and that December grew 39.1% on November.
- Documented data limits instead of estimating around them: no cost data (so no profit analysis) and a payment status with only one value.

Layoffs Data Cleaning SQL Server · T-SQL

Global tech layoffs data (layoffs.fyi via Kaggle) | 4,615 rows and 11 columns

- Built raw, staging and clean tables that preserve the source data; used TRIM, NULLIF, TRY_CAST / TRY_CONVERT and ROW_NUMBER() to standardise types and remove duplicates.
- Kept missing values as NULL rather than 0, merged only clear name matches (for example Tiktok and TikTok) and left ambiguous ones untouched.
- Wrote validation checks and documented dataset limitations, delivering 4,613 validated rows.

RELEVANT PROFESSIONAL EXPERIENCE

Quality Assurance Engineer, Chasescroll (Remote) Apr 2023 – Present

- Tested web and mobile applications across authentication, events, ticketing, wallet transactions, escrow, fundraising and service bookings; validated workflows against expected behaviour to find inconsistencies and potential data issues.
- Documented and tracked 200+ bugs in structured issue logs using Jira and Trello, and verified fixes with developers.
- Prepared daily reports for management documenting team tasks, progress and outstanding work.
- As Compliance Officer, monitored team members' daily task progress, followed up on outstanding work and escalated unresolved issues to management.
- Helped users with reported payment issues by requesting fixes from developers; recommended UI, navigation and payment-integration improvements, all of which were accepted.
- Trained a junior tester on core application workflows and testing procedures.

EDUCATION AND TRAINING

B.Sc. Economics, Kogi State University, Anyigba 2021

Quality Assurance Analyst, Astech Academy 2022
